International Cooperation at NASA

Timothy Tawney

Senior International Programs Specialist, NASA HQ, OIIR

Discovery Pre-Proposal Conference

November 24, 2014

International Cooperation is NASA Heritage

- National Aeronautics and Space Act of 1958
 - The aeronautical and space activities of the U.S. shall be conducted so as to contribute materially to one or more of the following objectives: *[of 9]*
 - (1) The expansion of human knowledge of the Earth and of phenomena in the atmosphere and space;
 - (7) Cooperation by the United States with other nations and groups of nations in work done pursuant to this Act and in the peaceful application of the results thereof.
- National Space Policy of June 2010
 - Expand international cooperation on mutually beneficial space activities to: broaden and extend the benefits of space; further the peaceful use of space; and enhance collection and partnership in sharing of space-derived information.
 - Pursue human and robotic initiatives to develop innovative technologies, foster new industries, strengthen international partnerships, inspire our Nation and the world, increase humanity's understanding of the Earth, enhance scientific discovery, and explore our solar system and the universe beyond.

International Cooperation: Overview

- International cooperation at NASA:
 - Has been a cornerstone of NASA's activities throughout its history
 - Since 1958, NASA has concluded over 4000 agreements with over 100 nations and international organizations
 - Over 700 active international agreements
 - Cooperation now established with every region in the world
 - 8 partners account for 50% of the agreements
 - ESA, France, Germany, UK, Italy, Canada, Japan, Russia
 - Every Mission Directorate has international partnerships
 - Approximately 2/3 of SMD missions in operation have international contributions
 - By mission area: 2/3 of all NASA agreements are for science activities

Why International Cooperation?

- Benefits of international cooperation:
 - Leverage resources (financial, technological, scientific, etc.)
 - Access foreign capabilities or geography
 - Adds unique capability and/or expertise
 - Increases mission flight opportunities
 - Enhances the scientific return
 - Promote U.S. foreign policy interests
 - NASA follows foreign policy guidance from the U.S. Department of State

Challenges to International Cooperation

- Management complexity
 - Decision-making is inherently more complex
 - Communication challenges
 - Differing specifications, standards and assumptions
- Technical and programmatic risk
 - Interdependence – the “critical path” issue
 - Interfaces are difficult to manage at a distance; it’s harder to monitor progress and get early warning of problems
 - Multiple partners with multiple interfaces adds complexity
- Political risk
 - Budgetary and bureaucratic uncertainties
 - Potential linkage to political activities unrelated to the cooperation

International Cooperation: Current Guidelines

- NASA international partners are generally government agencies due to the significant level of investment and legal requirements
- Each Partner funds its respective contributions, but contributions need not be equivalent
- Cooperation must be consistent with foreign policy objectives of each Partner
- Projects/Partnerships:
 - Must have scientific and technical merit and meet NASA program objectives
 - Must be mutually beneficial (demonstrate specific benefit to each Partner)
 - Are structured to protect against unwarranted technology transfer
 - Are structured to establish clearly defined managerial and technical interfaces to minimize complexity
 - Are documented in a written, binding agreement, closely coordinated with the U.S. Department of State and other U.S. government agencies as needed

Why Do We Need International Agreements?

- International Agreements are tools that:
 - Clarify responsibilities of the partners
 - Confirm commitments and terms
 - Document the quid pro quo and benefits of the cooperation
 - Protect investment and interests, such as:
 - Technical data rights
 - Intellectual property rights
 - Allocation of risk – cross-waiver of liability
 - Allow import/export of technical data and goods
 - Confirm arrangements to meet international obligations, such as UN Registration Convention, if necessary

When Do We Draft International Agreements?

- International Agreements will not be put in place for proposals
- Non-U.S. Participation Requirements are detailed in section 5.7 of the Discovery AO
- If the AO proposal is from a foreign entity – or if U.S. AO proposal includes foreign participation – a Letter of Commitment is needed from the foreign partner’s government agency or funding institution, acknowledging the activity and preferably indicating sufficient funds will be made available
- International Agreements are drafted after final selections are made
- ***Note : International Agreements will likely take several months or longer to put into place!***

NASA's International Agreements

- NASA's International Agreements do **NOT** trump export control laws & regulations

An International Agreement does not replace a contractor's need for a Technical Assistance Agreement
