

**Technology Workshop for Discovery  
Green Propellant Infusion Mission**

April 9, 2014

# Technology Demonstration Mission

*“A high performance green propellant has the potential to revolutionize how we travel to, from and in space”*

*Michael Gazarik,  
NASA Associate Administrator,  
Space Technology Mission Directorate*

# GPIM Project Summary

- Project Description
  - Public/private partnership involving multiple government organizations and multiple contractors
  - Demonstrate advanced in-space propulsion system based on USAF developed AF-M315E “green” propellant
    - ❖ Over \$15M of industry/government investment
    - ❖ More than a decade of research (handling, performance, etc.)
  - Mature technology to TRL9
  - Baseline mission:
    - ❖ Demonstrate ESPA class propulsion subsystem
    - ❖ Multiple orbit lowering operations/inclination change
- Project Status
  - Conducted CDR in March 2014
  - Component production and testing underway
  - Manifested Falcon Heavy STP-2 mission, August 2015

# Why Green Propellant Matters

- Propellant Performance
  - ~50% higher density-specific impulse than hydrazine
  - Comparable system performance to bi-propellants
  - Lower temperature capability opens mission trade space
- Science
  - More payload capability or longer mission duration
  - Wide range of spacecraft sizes: large to nano
  - More launch options for benign secondary payloads without hazardous propellants
- Safety
  - Reduced toxicity enables easier handling and processing
  - Human Space Operations
- Economics
  - Reduced launch, range, and operations costs
  - US developed propellant and thrusters enable domestic sources
  - Supports “ship and shoot” concept of operations

Aerojet Rocketdyne Technician handles AFM315E propellant

Traditional HAZMAT suit for fueling is not required

Flight proven green propellant system enhances U.S. industrial competitiveness

# Propellant Comparison

	AF-M315E Propellant	Hydrazine/Bi-propellants
Performance	~50% greater density-impulse performance than hydrazine, competitive with bi-prop at system level	
Flammability	Vapor flammability essential non-existent, can even reduce small fires	Highly reactive/flammable
Handling	“Short sleeve” operations/ FedEx can deliver it	Requires HAZMAT suit for handling and redundant containment facilities
Human Spaceflight	Low vapor pressure, low toxicity, safer working enviroment, non-reactive, water bi-product	Reactive, easily evolves, can cause unanticipated failures (Apollo 15 parachute)
System Complexity	Comparable to hydrazine	50% less complexity than bi-prop (no pressure, no regulators, no oxidizer tanks, etc.)

**Green Propellant is not only environmentally benign, it offers substantial improvements in performance, cost, and safety**

# Examples of Performance Benefits to Planetary Missions

Mission	Propulsion Functions	System Replaced	AFM315E Enhancement
Asteroid Redirect Mission	<ul style="list-style-type: none"> <li>Asteroid De-spin</li> <li>RCS</li> </ul>	<ul style="list-style-type: none"> <li>Bipropellant</li> </ul>	<ul style="list-style-type: none"> <li>60% <b>reduction in system complexity</b></li> <li>Reduced propulsion system volume and 22" <b>bus length reduction</b></li> <li><b>Significant cost reduction</b></li> <li>Lower risk with crew visit</li> </ul>
WFIRST Mission	<ul style="list-style-type: none"> <li>Primary <math>\Delta V</math>s</li> <li>Mid-course corrections</li> </ul>	<ul style="list-style-type: none"> <li>Hydrazine</li> </ul>	<ul style="list-style-type: none"> <li>10% <b>reduction in propellant mass</b></li> <li>System <b>dry mass reduction</b> of &gt;30%.</li> </ul>
Mars Geyser Hopper	<ul style="list-style-type: none"> <li>Landing</li> <li>Geyser site hopping</li> </ul>	<ul style="list-style-type: none"> <li>Hydrazine</li> </ul>	<ul style="list-style-type: none"> <li><b>Improved density*Isp</b> allows for two extra hops</li> <li><b>Provides an additional year of science</b></li> <li>Loosens launch constraints due to low temp</li> </ul>
Spun Mars Ascent Vehicle	<ul style="list-style-type: none"> <li>All RCS functions</li> </ul>	<ul style="list-style-type: none"> <li>Electric TVC N2 Gas generator/ Cold Gas Systems</li> </ul>	<ul style="list-style-type: none"> <li>Isp density and <b>low temperature capability</b> replace complex electric system where hydrazine won't work due to density &amp; temperature limits</li> <li>Eliminates systems, complexity, and reduces risk</li> </ul>
Int'l Lunar Network lander	<ul style="list-style-type: none"> <li>Vernier descent control</li> <li>Landing propulsion</li> </ul>	<ul style="list-style-type: none"> <li>Hydrazine</li> </ul>	<ul style="list-style-type: none"> <li>Antares to Minotaur V <b>launch vehicle reduction</b></li> <li>Improved mass/Isp performance</li> </ul>
Deep Space Microsat	<ul style="list-style-type: none"> <li>Primary <math>\Delta V</math>s</li> <li>Mid-course corrections</li> </ul>	<ul style="list-style-type: none"> <li>Hydrazine</li> </ul>	<ul style="list-style-type: none"> <li><b>Increases primary <math>\Delta V</math></b> by 70%</li> <li>RCS propellant by 100% allowing for follow-on science opportunities</li> </ul>

**GPIM offers similar benefits to other science missions**

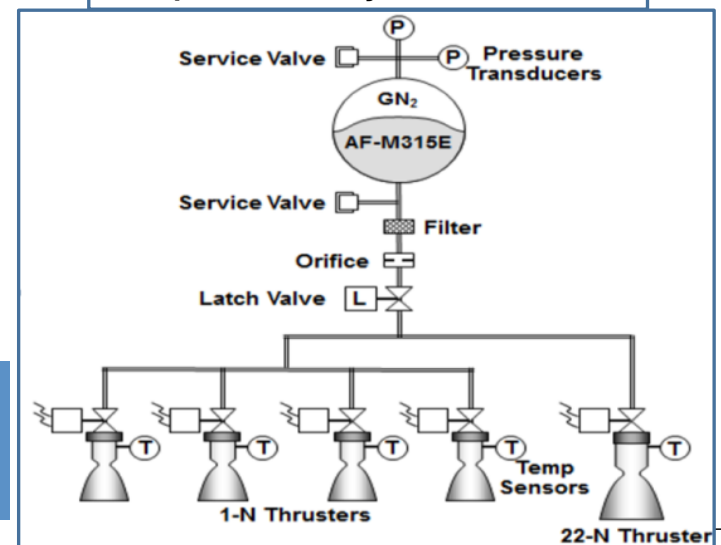

# GPIM Flight Objectives

- Space and ground demonstration/ validation of advanced propellant and propulsion system offering:
  - Increased propulsion efficiency
  - Significant improvements to ground & space crew safety
  - Reduced propulsion subsystem complexity
- Demonstrate 1 N and 22 N thruster performance:
  - 3-axis attitude control
  - Momentum dumping capability
  - Primary Divert (215 m/sec)
- Technology maturation
  - Components validation, TRL = 9 post flight
  - System flight validation, TRL = 7+ post flight

**GPIM will flight demonstrate advanced propellant and thrusters, advancing the technology to TRL 9**

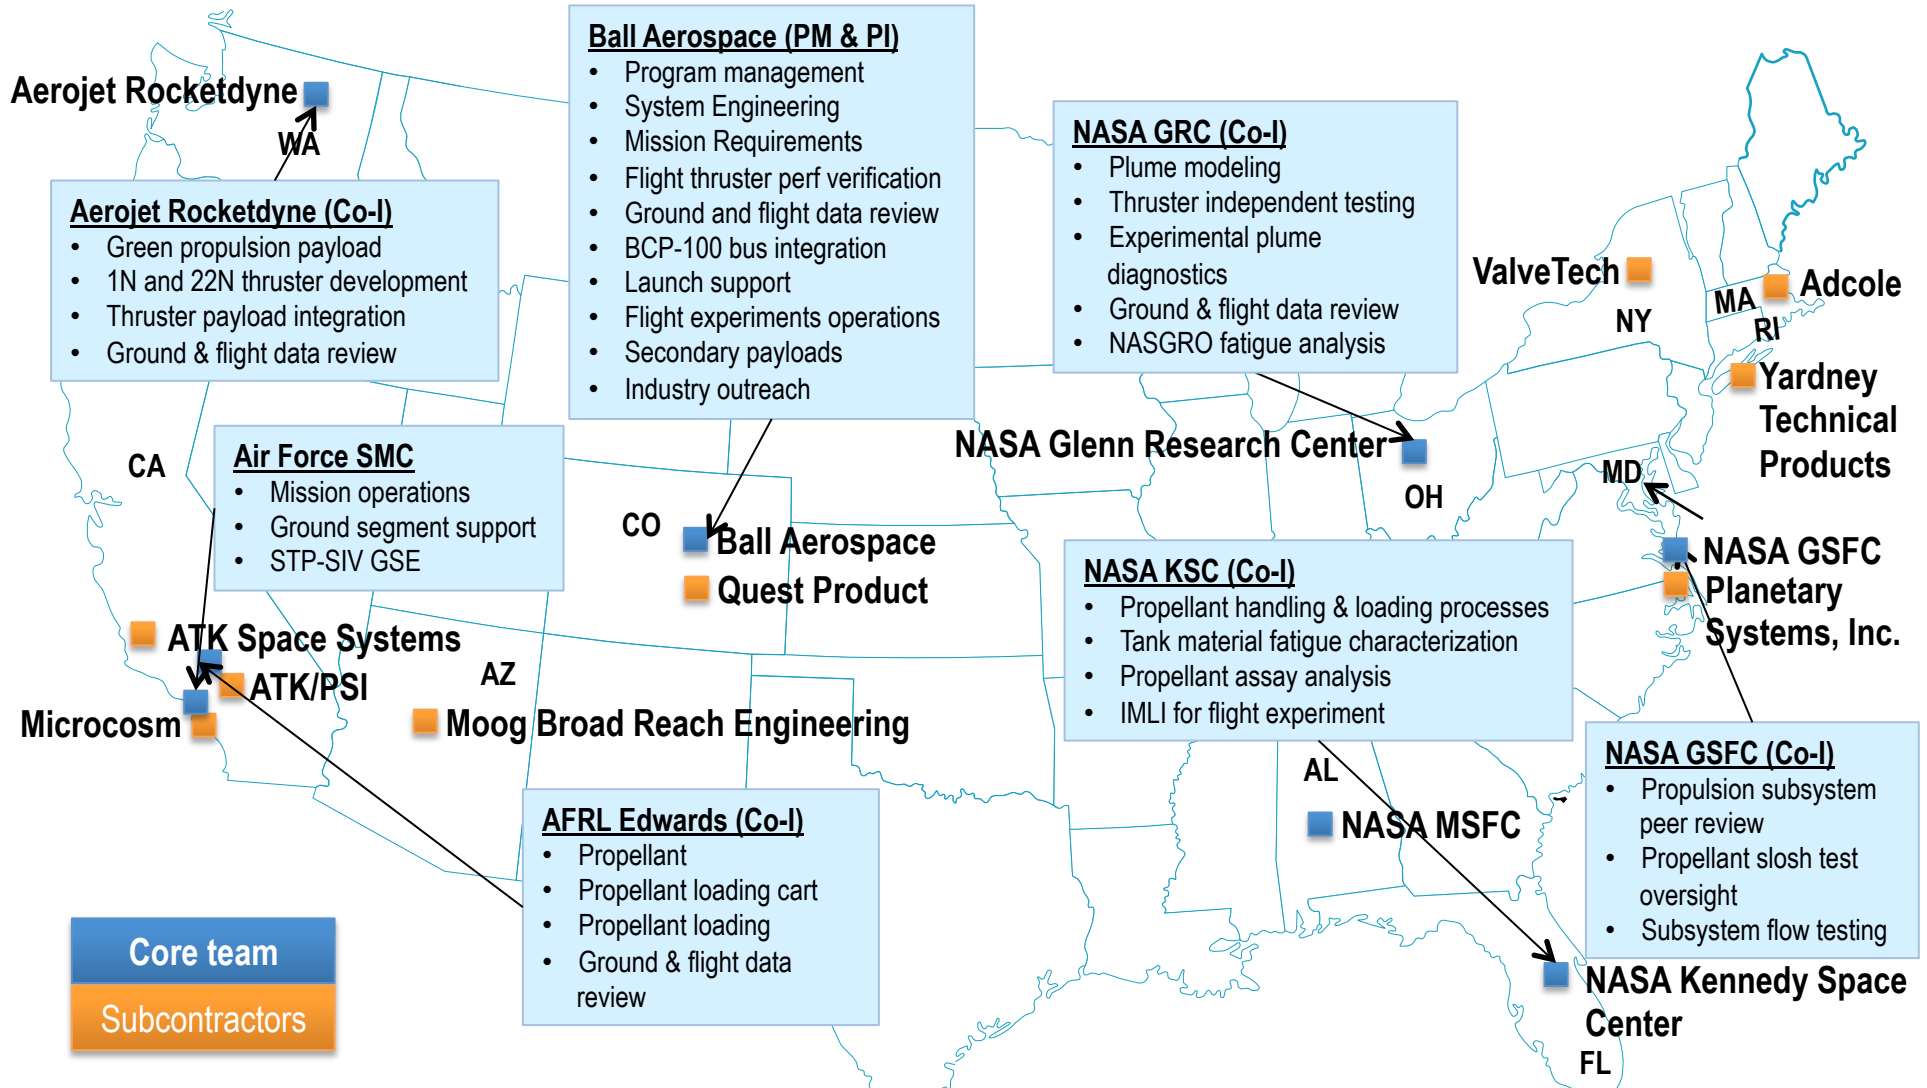

**Propulsion Subsystem Schematic**

# GPIM Team Contributors and Locations

Cross-cutting team includes all technology stake-holders: NASA, DoD, industry

## Conclusion

- Innovative, Government – Industry partnership
  - Leverages 15+ years USAF investments
  - Collaboration includes 4 NASA Centers
  - 1N & 22N thrusters will be a part of Aerojet Rocketdyne catalog
- GPIM has potential for significant, lasting impact to:
  - Propulsion performance
  - Science return
  - Ground and space safety
  - National competitiveness
- Technology applicable to nearly all space missions:
  - Science
  - Defense
  - Commercial

**BACKUP**

April 9, 2014

# 2013 / 2014 GPIM Progress

- Established project technical, schedule and cost baseline
- Completed SRR, KDP-B, PDR, IBR, KDP-C, CDR
- Completed plume modeling (GRC)
- Completed design and validation of 22N lab model thruster (AR)
- Initiated all propulsion subsystem procurements
- Initiated all bus procurements
- Initiated upgrades to test facilities (GRC, AR)
- Initiated propellant loading cart development (AFRL Edwards)
- Initiated DOT and hazard classification development (AFRL Edwards)
- Initiated development of launch site fuel handling procedures and fracture mechanics testing (KSC)
- Range Safety reduced hazard classification from 'catastrophic' (heritage storable propellant) to 'critical'
